

Experiential Learning through Campus-Based Student Farming

Invitation to Participate

Dr. Bob Williams is seeking potential participants in a qualitative study exploring the opportunities available for experiential learning through student farming on selected college and university campuses. Of particular interest are programs that facilitate student-centered activities in agriculture. This includes conventional, sustainable and organic production methods. Programs from baccalaureate degree granting institutions may be nominated for inclusion in the study, which will begin in August 2013.

To nominate student farming opportunities at your institution, send a brief description of the program (or link to a website/Facebook page), name of institution, and name with contact information for project director/advisor or farm manager to:
